

10 Business Ideas One Person Can Run With Claude

For the woman who keeps hearing “use AI” and has no idea where to actually start

If AI Advice Has Felt Vague and Unhelpful So Far

You've probably heard “just use AI to build a business” more times than you can count. It sounds exciting, and also completely unclear. Use it to do what, exactly? Build what?

This guide is different. It's ten specific, real business models — not vague suggestions — that one person can genuinely run, using Claude as the assistant handling the parts that used to require a whole team.

You don't need any technical background. You need to understand, in plain terms, what each idea involves and what Claude actually does for you inside it. That's exactly what this guide gives you.

Why This Works Now, When It Didn't Before

Running a small business used to require a small team — someone to write, someone to research, someone to handle admin. That's what made solo businesses genuinely hard to sustain.

Claude changes that specific equation. It doesn't replace your judgement or your expertise — those stay entirely yours. What it removes is the need for a team to handle the repetitive, time-consuming layer underneath your expertise: the drafting, the research, the first version of things.

That's why a single person, today, can realistically run a business that would have needed three or four people just a few years ago.

The 10 Ideas, Explained Simply

1. A Tiny, Specific Software Tool

Not a huge app — something small and specific, like a simple booking reminder for hairdressers, or an intake form for therapists. Claude can write the actual code for you, even if you've never coded before. You bring the understanding of the problem; Claude builds the tool.

2. An Organised List of Useful Information

Some information is genuinely valuable once it's gathered and organised in one place — like every wholesale supplier in a specific industry, with their prices and requirements. Claude helps you research, structure, and present this clearly. People pay a small monthly fee for access.

3. Many Small Web Pages, Each Answering One Question

Rather than one big website, this is many small pages, each answering one specific, commonly searched question — like “best accountant in [town name]” repeated for every town. Claude generates each page from a template you design once.

4. A Newsletter People Actually Pay For

A regular email, sent to a specific audience, containing genuinely useful analysis — not generic content. Claude helps you research and draft; you bring the judgement and the final voice.

5. A Course You Never Appear On Camera For

Teaching what you know, delivered by an AI presenter instead of you on screen. Claude helps you script it clearly; a separate tool (like HeyGen) delivers it. This is exactly the model this entire website is built on.

6. Helping Businesses With Research, Without Being a Consultant Yourself

Claude can handle a large portion of the research and analysis work that clients pay consultants for — market research, competitor analysis, clear reports. You bring the relationships and the final judgement.

7. A Small Paid Community

A group of people paying a small monthly fee to be part of something — with Claude helping you prepare weekly content and discussion prompts, so it doesn't become a second full-time job.

8. Licensing One Product to Many Companies

Instead of selling one thing to one person, you license it to companies — for example, a helpful guide that HR departments give to every new employee. One thing built, sold many times over.

9. Helping Local Businesses Get Found Online

Many small businesses — plumbers, tutors, physiotherapists — are simply invisible online. You can build them a very simple system to get found, using Claude to help write the pages and the messaging.

10. Teaching and Content, Without Ever Showing Your Face

Building an audience through written or video content — with Claude handling the writing and structure — and eventually selling something small and valuable to the people who've come to trust you.

Before You Choose — Three Honest Questions

Don't pick based on which sounds most exciting. Pick based on these three questions, answered honestly.

1. Is someone already paying for something like this?

If yes, real demand exists. You're not guessing — you're confirming.

2. Can I actually do this without exhausting myself?

Does it fit your actual energy and skills, or does it quietly require becoming someone else?

3. Can Claude genuinely handle most of the repetitive parts?

If yes, your costs stay low and your time stays yours. If every part still needs a human team, the maths changes.

Your First Move

You don't need to choose all ten. You need one. Which idea, even loosely, feels like it fits your actual life and expertise right now?

The idea I'm most drawn to:

One small step I could take this week:

You don't need the perfect idea. You need the first honest version of one.

Where To Go From Here

If one of these ideas feels genuinely possible, that feeling is worth trusting. This guide is one small piece of a much fuller video walkthrough covering all ten ideas in depth, with real numbers and the exact Claude prompts used to build each one.

It's also connected to The Successful Woman's System — a complete framework for building something real, one honest step at a time, without needing a team, a big budget, or a background in tech.
