

THE MONIFA METHOD

THE BLUEPRINT: Starter Brand Bible

A 3-Step Guided Framework

Follow this step-by-step sequence to construct your AI brand foundation. Do not overthink — pick the option that fits best, fill in the blanks, and move to the next step.

Engineering Your Muse

Instead of staring at a blank page, lock in your character foundation by selecting your options below.

ACTION 1A • DEFINE YOUR POSITIONING ANGLE

Complete this single sentence:

"I help _____ navigate _____ using lessons from my experience in _____."

ACTION 1B • CHOOSE YOUR VOICE REGISTER

Select ONE tone option that matches how you want to sound:

Option 1: The Direct Coach — Straightforward, zero fluff, high accountability.

Option 2: The Insightful Mentor — Compassionate, reflective, grounded in experience.

Option 3: The Visionary Creator — Bold, perspective-driven, quiet authority.

ACTION 1C • GENERATE YOUR CHARACTER REFERENCE

Fill in the brackets inside this master prompt to generate your avatar's image:

Photorealistic [age and gender, e.g. 30-year-old woman], [key features, e.g. olive skin, slicked dark hair, soft hazel eyes], natural skin texture, soft under-eye detail. Neutral, high-contrast studio setting, soft side-lighting. Photorealistic, 85mm lens, high-fidelity texture.

WHICH TOOL SHOULD I USE?

Option A — You have your own photo: Upload it to Google Gemini (the free "Nano Banana" image tool) or Midjourney's image-reference mode, paste the prompt above alongside it, and choose your style: stylised (a slightly elevated, painterly version of the photo) or hyperrealistic (a photo-accurate digital twin).

Option B — No photo, starting from scratch: Skip the upload. Just fill in the brackets above with a full description and paste the whole prompt into Gemini, Midjourney, or Leonardo AI to generate a brand-new custom avatar.

New to all this? Start with Google Gemini — it's free, and needs nothing more than the prompt pasted in.

Keep this image. It's your reference for everything in Day 2.

Building Your Avatar's Visual Range

One good photo isn't a brand — it's a portrait. Use your Day 1 reference to generate your avatar in three different settings, so it starts to feel like a real, consistent presence rather than a single lucky render.

ACTION 2A • THREE SCENE PROMPTS, ONE CHARACTER

Paste your Day 1 image as the reference for each of these. Same face, same hair, three different worlds:

SCENE 1 — THE COSY HOME OFFICE

[Character reference] seated at a wood desk, a candle and a closed laptop beside them, soft daylight coming through blinds. Cinematic depth of field, 35mm lens.

SCENE 2 — THE ROOFTOP, GOLDEN HOUR

[Character reference] standing at a rooftop railing, a city skyline soft behind them, warm golden-hour light catching their hair. Cinematic depth of field, 35mm lens.

SCENE 3 — THE MINIMALIST STUDIO CORNER

[Character reference] sitting relaxed in a minimalist room corner, a plain cream wall behind them, softly lit by diffused studio side lighting. Cinematic depth of field, 35mm lens.

WHICH TOOL SHOULD I USE?

Same as Day 1 — Gemini, Midjourney, or Leonardo AI. Feed each one your Day 1 reference image alongside the scene prompt, one at a time.

Bringing Your Avatar to Life

Today is hands-on experimentation. Take your three stills from Day 2 and animate each one — this is what turns a character into a presence.

ACTION 3A • THREE CLIPS, THREE MOTIONS

CLIP 1 — HOME OFFICE

Slow push-in as they look up from their desk. One natural blink, a quiet, content exhale. 5 seconds. No dialogue.

CLIP 2 — ROOFTOP

A gentle breeze moves their hair as they slowly turn their head toward the skyline. One natural blink. 5 seconds. No dialogue.

CLIP 3 — STUDIO CORNER

Slow, steady push-in on their seated silhouette. A quiet exhale, a small settled smile. 5 seconds. No dialogue.

WHICH TOOL SHOULD I USE?

Upload each still into Dreamina (Kling or Seedance, whichever you prefer) alongside its motion prompt. Kling's free tier gives you 66 credits a day — a 5-second clip runs roughly 20–25 credits, so three clips fit comfortably in one day, with credits left over for a retry if one doesn't land.

Try Seedance for a more natural feel, Kling for a more polished one — keep whichever looks more like your avatar.

The Transparency Flex

Only relevant once you've decided to actually build this. Disclosing your AI presence isn't a handicap — it's your proof of concept. You state it once clearly, then never address it again.

BEFORE YOU TOUCH ANY SETTINGS

If you're still deciding whether to move forward, skip this page for now. The step below changes a real setting on a real Instagram account — only do it once you've decided, and ideally on a dedicated account for this persona, not the personal profile you already use day to day.

PICK YOUR ONE-LINE DISCLOSURE

Choose ONE template below, fill in your niche, and add it to your bio or pinned post:

Template A — The Technical Standard: "An AI-delivered persona sharing real-world insights for _____."

Template B — The Editorial Standard: "An AI-designed sanctuary for _____."

ENABLE INSTAGRAM'S AI LABEL

Double-check you're logged into the right account before you start.

1. Open Instagram → go to Edit Profile.
2. Scroll to Profile Category / Labels.
3. Toggle on AI Creator — this acts as an immediate trust signal to your audience.

Your Completed Starter Brand Bible

Review your outputs from Days 1 to 3. This is your active brand foundation.

Target Audience & Angle:

Voice Register:

Character Reference & Three Scenes:

Three Clips:

Disclosure Line (if you completed the bonus):

What Happens Next

Your foundation is built. You now have a character, a voice, a small visual library, and three moving clips to see how it feels in motion.

If you're ready to connect this foundation to a complete automated backend — the full cinematic register, the automated lead pipeline, and direct monetisation — the full system is inside The Faceless Studio (£47, one-time payment):

- All 7 pillars, brand to monetised, built end to end
- Full AI prompt architecture, including the Cinematic Prompt Bible bonus
- The Automated Pipeline bonus — comment-to-email lead capture, built in

The foundation above is yours to keep. Build at your own pace.
